Lab 5 Tips

For Windows:

- The "make" command is not natively supported on Windows. Pelican has different syntax for updating content and publishing to github for Windows users.

- **Instead of "make devserver," run:**

1. "pelican content"
2. "pelican --listen" to run server on localhost:8000

- **Instead of "make github," run:**

1. "pelican content -o output -s pelicanconf.py"
2. ghp-import output (you'll need to install ghp-import with pip/conda)
3. git push origin src
